

PRESS RELEASE

AIR TAHITI, LONG COMMITTED TO ENVIRONMENTAL PROTECTION, COMPLETES ITS CARBON FOOTPRINT ASSESSMENT

Papeete, French Polynesia - April 2, 2026

Air Tahiti is proud to announce the publication of its Carbon Footprint Assessment, a process initiated in 2023.

As Tahiti and French Polynesia's historic airline, Air Tahiti operates a network of 48 destinations across a territory as vast as Europe or North America.

Tahiti and its islands are among the most remote islands in the world, located in the heart of the largest ocean on the planet. This unique geographical reality makes air travel virtually the only connection between the islands and their communities.

For many years, inter-island airline Air Tahiti has been committed to a Corporate Social Responsibility (CSR) approach and to sustainable development through a wide range of environmentally responsible initiatives focusing on climate, biodiversity, the environment, Polynesian heritage and local communities.

Carbon footprint assessment

As part of its commitment to strengthening its Corporate Social Responsibility (CSR) policy, Air Tahiti undertook an assessment of its greenhouse gas emissions using the Bilan Carbone® methodology.

The assessment was carried out by Time to Fly Pacifique, the first consultancy based in French Polynesia specializing in Bilan Carbone® assessments and a subsidiary of a leading mainland French group with expertise in the field.

Air Tahiti's carbon footprint assessment was conducted in accordance with the Bilan Carbone methodology developed by the Association Bas Carbone (ABC). The methodology is designed to measure and reduce greenhouse gas emissions generated by organizations, businesses and human activities.

Air Tahiti's Carbon Footprint

In 2023, Air Tahiti began the process of assessing its carbon footprint, taking into account the specific characteristics of both French Polynesia and the company itself, which encompasses a wide range of activities across Tahiti and the various archipelagos:

- Airline operations
- Aircraft maintenance center
- International airport operations
- Bora Bora Navettes
- Air Archipel
- Domestic airport operations

PRESS RELEASE

A mapping of Air Tahiti's activities and flows was carried out to identify the energy, transportation, materials and people flows that generate greenhouse gas emissions across the Air Tahiti Group. As expected, fuel consumption accounts for more than 75% of the airline's emissions. Other significant areas of impact include electricity consumption, purchasing and buildings. An action plan structured around five key areas has been developed to reduce the company's various environmental impacts. Employee involvement is essential to this process, which is why Air Tahiti has begun Climate Fresk workshops.

Climate Fresk: a key initiative to engage employees

The Climate Fresk workshop enables participants to understand the mechanisms, scale and complexity of the challenges associated with climate change, helping them take ownership of these issues and, above all, take action.

It is an essential tool for initiating the transition towards a regenerative economy.

As the largest private-sector employer in French Polynesia, Air Tahiti is committed to raising awareness among all 1,600 of its employees across Tahiti and the islands about environmental challenges.

Workshop facilitators were trained beginning in August 2025 and started training Air Tahiti teams on November 5, 2025. The initiative has been both valuable and well received by employees. This initiative complements the many actions already underway and set to continue:

Numerous initiatives already underway

- **The Ahureva carbon offset programme, available since September 2024**

Air Tahiti gives its passengers the opportunity to take action by offsetting the greenhouse gas emissions associated with their flight through its Ahureva programme.

The name Ahureva means "climate" or "related to climate", reflecting the programme's ambition to contribute to a healthier climate.

Since December 2025, the programme has also enabled passengers to support a Polynesian non-profit organization, SOP Manu, which works to protect endemic bird species.

Offset your flight:

- **The first airline in French Polynesia to join the Convention des Entreprises pour le Climat (CEC)**

Air Tahiti is the first airline in French Polynesia to join the CEC Pacifique – Convention des Entreprises pour le Climat, an organization dedicated to helping business leaders understand and address the major environmental challenges of our time.

The CEC develops programmes designed to raise awareness among economic decision-makers and support the transition from an extractive economic model towards a regenerative economy by 2030.

The first CEC session held in French Polynesia, from April 16 to 18, 2024, brought together 64 business leaders and representatives of local government agencies. Participants explored some of

About Air Tahiti

For more than 65 years, Air Tahiti has been the leading inter-island airline in French Polynesia, based at Tahiti-Faa'a International Airport. A privately owned Polynesian company, Air Tahiti fulfills a public service mission across the five archipelagos of Tahiti and its islands. A long-standing partner of ATR, the airline acquired its first ATR aircraft in January 1987, replacing its Fokker fleet at the time. Its network has progressively expanded to serve an increasing number of islands. Today, its ETOPS-qualified ATR fleet connects more than 90% of the country's inhabited islands. Air Tahiti's network covers 48 islands across French Polynesia, spanning a territory as vast as Europe or North America, with an international destination in the Cook Islands. Distances between the islands range from 15 km (Tahiti-Moorea) to 1,600 km (Tahiti-Mangareva in the Gambier Islands), equivalent to the distance between Paris and Stockholm or New York and Miami. To operate this extensive network, Air Tahiti has a next-generation fleet comprising 10 ATR 72-600s and two ATR 42-600s. The airline regularly renews its aircraft to meet the latest standards in comfort, performance and safety. Since 2017, Air Tahiti has been the first airline in the world to feature Polynesian designs inspired by traditional tattooing on its aircraft, reflecting its strong cultural identity. The airline is also actively involved in local social and environmental initiatives. With more than 1,600 employees across Tahiti and the islands, Air Tahiti is now French Polynesia's largest private-sector employer.
